                                                                                       Submitted (22-MAY-1998) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 22, 1998 this sequence version replaced gi:3126769.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (03-FEB-1998) Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 190482)
The repeat regions shown were identified using RepeatMasker by

```

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Location/Qualifiers

Sequence similarities were identified using Powerblast by Jinghui

Number of hits that pass the threshold :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PS Claim 6; Figure 2a: 83pp; French CC This sequence encodes human interleukin-13 (IL-13) beta receptor. The CC invention relates to new purified peptides comprising 380 or 427 amino and 427 am proteins are designated IL-13R beta and alpha respectively. CC affinity, but acquires high affinity when associated with the IL-4 CC alids encoding IL-13R beta and alpha are used as receptor. Nucleic acids encoding IL-13R beta and alpha are used as CC such as loss of heterozygosity aberrant synthesis or genetic anomalies. They are also used for production of recombinant IL-13R beta and alpha are used as IL-3 induced responses for treatment of inflammation and communoassays) to diagnose diseases associated with abnormal expression. CC of IL-13 receptors are also useful as antisense molecules for gene communoassays) to diagnose diseases associated with abnormal expression. CC used to identify ligands and modulators of IL-13R. Note: IL-13R beta correspondention of IL-13R. Cells that express IL-13R. Note: IL-13R beta correspondention (T86464), which is not the same as that shown in the sequence listing (T85826).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
New nucleic acid encoding interleukin-13 receptor binding chain and transformed cells - proteins, antibodies and inhibitors, for treating immunoglobulin E-mediated diseases, e.g. Graves disease, and in diagnosis and in diagnosis are chain of the interleukin-13 receptor, designated IL-13bc IL-13bc acts a mediator of the known biological activities of IL-13. The present sequence encodes the human interleukin-13 receptor are used to mediator of the known biological activities of IL-13. The present sequence was isolated from human testis library. Recombinant IL-12bc proteins, and antibodies raised against them, are used to inhibit the binding of IL-13 to its receptor. They are particularly used to reet IgE-mediated conditions, e.g. allergy, asthma and immune complex discreters, especially lupus, nephritis, thyroiditis and Grave's disease. They are also used to treat immune deficiency (particularly in insematopoietic progenitor cells), cancer etc., and to increase macrophage activation, e.g. in yaccination. To potentiate IL-13 activity, a protein of the such activity is combined with IL-13bc and the mixture applied, in vivo, to a cell expressing at least one chain of the IL-13 receptor.
                                                                                                                                                                                                                                                                                                             W09731946-Al.

Antibodies can be used to assay circulating receptor (an abnormal level may be indicative of disease such as cancer), for labelling cells that express the receptor, and therapeutically as antagonist.

It can be used to detect ligands that promote proliferation and/or differentiation of such cells in cultures and may also be used to tree infertility. Antagonists of this receptor may be used to characterise ligand-receptor interactions, and as male-specific contraceptives. By blocking the action of IL-13, receptor antagonists and ligand-binding this receptor can also be used to modulate immune function, e.g. in

CC This cDNA clone codes for a novel human cytokine/peptide hormone coeptor, designated HR-1 receptor (see W41502). Plasmid ATG-531, creceptor (see W41502). Plasmid ATG-531, comparising HR-1 receptor contained in vector pBluescript SK+, colisated from a human testis cDNA contained in vector pBluescript SK+, colisated from a human testis cDNA library. Also claimed are a colisated from a human testis cDNA contained comprising the comprising amino acids 1-380 or 22-380 of the 380 cresidue HR-1 receptor amino acids sequence, a vector comprising compressing the polypeptide, and an antagonist to the compression compressing compression contains and compression compression contains contai

PT DNA encoding human cytokine-peptide hormone receptor - useful for preventing preventing or diagnosing, e.g. lowered resistance to infection, asthma, allergy, or haematopoietic disease Claim 1; Fig 1; 75pp; English.

CC (HR-1 receptor). This, or it's activators or agonists, can be used to treat, prevent or diagnose predisposition to lowered resistance to complete the prevent or diagnose predisposition to lowered resistance to induced by acquired immune deficiency syndrome (AIDS), aplastic anaemia, concurropaenia or cytotoxic treatments for cancer. Antagonists of the conditions associated with overexpression of the HR-1 receptor, e.g. antibodies or fragments of it may be used to treat conditions associated with overexpression of the HR-1 receptor, e.g. those listed above. Antibodies may also be used to assay levels of HR-1 creceptor, overexpression of which may be diagnostic of tumours, by usual immunoassays; to isolate and identify HR-1 receptor. The nucleotide sequence conditions for isolating genomic HR-1 clones, PCR primers, diagnostic condentification and mapping.

PT Nucleic acid sequence encoding human cytokine peptide hormone Preceptor - useful to treat, prevent or diagnose, e.g. lowered PT receptor - useful to treat, prevent or diagnose, e.g. lowered PT resistance to infection, asthma, allergy or haematopoietic disease CC claim 4; Page 61-62; 76pp; English.

CC cytokine/peptide hormone receptor, designated the HR-1 receptor CC cytokine/peptide hormone problem to the recombinant CC cytokine/peptide hormone problem to the recombinant CC cytokine/peptide hormone problem to the recombinant CC cytokine/peptide hormone problem to the receptor problem to isolate CC genomic HR-1 receptor, as a source of problem to isolate CC diagnostic reagent (particularly to detect gene mutations which CC identification and mapping, and in a claimed method for treating CC apatient having need of HR-1 receptor. HR-1 receptor activators CC and agonists can be used to treat, prevent or diagnose CC and agonists can be used to treat, prevent or diagnose CC or haematopoletic disorders, e.g. where induced by AIDS, aplastic CC anaemia, neutropaenia or cytotoxic treatments for cancer.

                                                                                                                                                                                                 CC This sequence encodes a novel ligand-binding receptor, Zcytor2, which CC shares homology with cytokine receptors and was isolated from a human CC testis cDNA library. The resulting polypeptide is a receptor for CC cytokines (particularly interleukin-13) and is expressed on the surface CC of testicular cells, probably being involved in spermatogenesis. It can CC be used to detect ligands that promote proliferation and/or CC differentiation of such cells in cultures and may also be used to treat CC infertility. Antagonists of this receptor may be used to characterise CC ligand-receptor interactions and as male-specific contraceptives. By CC blocking the action of II-13, receptor antagonists and ligand-binding CC this receptor can also be used to modulate immune function, e.g. in CC allergy and asthma, as a diagnostic to determine circulating levels of CC ligand and also to isolate and purify ligands. Antibodies can be used to assay circulating receptor (an abnormal level may be indicative of CC disease such as cancer), for labelling cells that express the receptor, CC and therapeutically as antagonist.

CC which shares homology with cytokine receptors and is isolated from CC which shares homology with cytokine receptors and is isolated from CC is a receptor for cytokines (particularly interleukin-13) and is conversed on the surface of testicular cells, probably being involved in CC expressed on the surface of testicular cells, probably being involved in CC expressis. It can be used to detect ligands promoting proliferation CC and/or differentiation of such cells in cultures and may also be used to treat infertility. Antagonists of this receptor may be used to contraceptives. By blocking the action of IL-13, receptor antagonists and CC injund-binding this receptor interactions and as male-specific contraceptives. By blocking the action of IL-13, receptor antagonists and CC injund-binding this receptor and also be used to modulate immune cc circulating levels of ligand and also to isolate and purify ligands. CC may be indicative of disease such as cancer), for labelling cells that cappess the receptor, and therapeutically as antagonist.

Example 14; Page 50-52; 69pp; English.

The II-13 binding protein and related therapeutic molecules can be used in the antagonism of at least one II-13 activity. They can be used for treating II-13 mediated conditions such as certain allergic conditions such as asthma or to inactivate locally administered II-13 after II-13 treatment. The products can also be used as diagnostic agents, e.g. fo detecting autoimmune diseases. The antibodies can also be used for immunotherapy and may also be used as a diagnostic tool.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in the antagonism of at least one II-13 activity. They can be used for Treating II-13 mediated conditions such as certain allergic conditions such as service to inactivate locally administered II-13 after II-13 treatment. The products can also be used as diagnostic agents, e.g. for detecting archimune diseases. The antibodies can also be used for immunotherary and may also be used as a diagnostic tool. The present sequence encodes the murine interleukin-13 (IL-13) binding chain of the interleukin-13 receptor, designated IL-13bc. IL-13bc acts a mediator of the known biological activities of FIL-13. The present sequence was isolated from the thymuses of 6.8 week old mice. Recombinant IL-13bc proteins, and antibodies raised against them, are used to inhibit the binding of IL-13 to its receptor. They are particularly used to treat IgE-mediated conditions, e.g. allergy, asthma and immune complex disorders, especially lupus, nephritis, thyroiditis and Grave's disease. They are also used to treat immune deficiency (particularly in CC chaematopoietic progenitor cells), cancer etc., and to increase macrophage activation, e.g. in vaccination. To potentiate IL-13 activity, a protein with such activity is combined with IL-13bc and the mixture applied, in vivo, to a cell expressing at least one chain of the IL-13 receptor continuous to detect expression of IL-13, its receptor or binding chain, and to raise specific antibodies which may be useful for treating some tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
